MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

JULY 1935

TEMPERATURE

The mean temperature for July was generally above normal in Canada and Newfoundland with the exception of northwestern and south central British Columbia, the Yukon Territory, far northern Quebec, and the western part of Newfoundland.

In the south central interior and immediately east of the Alaskan panhandle temperatures in British Columbia were two degrees below normal. Elsewhere temperatures in that province were nearly normal except between the upper Fraser and the Peace River where there was an excess of two degrees.

In the southern portion of the Peace and Athabaska valleys and in the eastern portion of the older agricultural region of Alberta there were excesses of two to five degrees. In the southern foothill region and the south of the Bow valley the excesses were mostly about one degree. In Saskatchewan the mean temperature was generally five degrees above the July normal. The exceptions were a small district west of Battleford, the region from the main forks of the Saskatchewan eastward through the Park Belt to Manitoba and scattered localities in the Cypress Hills. In these excepted regions the excess was six to eight degrees. Throughout Manitoba there was a general excess ranging from four to seven degrees.

Mean temperatures were above normal in northern Ontario. The Kenora and Thunder Bay districts reported excesses of about four degrees. In the Algoma, Sudbury, and Temiskaming districts the excess was four to six degrees except near Lake Temiskaming and on the shore of James Bay where temperatures were nearly normal. Along the upper Ottawa River and around Lake Nipissing there were excesses of three to four degrees.

Along the lower Ottawa and on the ridge between the Georgian Bay and Lake Ontario the temperatures were one to three degrees above normal. For the remainder of southern Ontario the excess was three to six degrees.

In Quebec along the lower Ottawa and upper St. Lawrence Rivers there were excesses of two to four degrees. In the Laurentian Hills the temperature was normal to three degrees above but in the Lake St. John region there were excesses of one to three degrees. In the extreme southwestern counties, in the Richelieu and Yamaska valleys, the temperatures were three to five degrees above normal but in the Chaudière valley were normal. Along the middle and lower St. Lawrence temperatures were two degrees above normal while along the north shore of the Gulf they were normal or lower.

In the Atlantic Provinces the mean temperatures were generally above normal. In the St. John River valley, the Annapolis valley, Prince Edward Island, and around the Basin of Minas and Chaleur Bay temperatures were generally two or three degrees above normal. Along Northumberland Sound and the southeastern coast of Nova Scotia temperatures were normal or one degree above.

In Newfoundland the temperatures were somewhat below normal in the western and southern sections while on the eastern coast they were normal to two degrees above.

In Hudson Strait the temperature was normal to one degree below while on the west coast of Hudson Bay the mean temperature ranged from normal to two degrees below.

PRECIPITATION

Rainfall on the northwestern section of Vancouver Island and north along the coast was twenty-five to forty per cent. below normal. In the southeastern section of Vancouver Island the precipitation was normal to three times the normal amount. Along the Fraser River and on the adjoining coast there were excesses of ten to sixty-five per cent. In the Okanagan valley the rainfall totalled two to four times the normal amount but was normal in the Similkameen valley. In the Kootenay region and in the northern passes of the Selkirks there were excesses of fifty to seventy per cent. In the upper Fraser valley the data so far received indicates a moderate excess.

In the extreme southwestern corner of Alberta there were deficiencies of ten to seventy-five per cent., averaging about fifty per cent. In the southeastern corner of the province south of the Red Deer River there was an excess of fifteen to eighty per cent. and sixty per cent. generally. In the foothill region there were excesses of thirty to one hundred per cent. with the exception of the City of Calgary which reported a deficiency of thirty-five per cent. Along a narrow band extending through Edmonton, Camrose, Stettler and Alsask there were deficiencies of five to fifty-five per cent. Along the north Saskatchewan River between Edmonton and the Saskatchewan boundary there were excesses of twenty to thirty per cent. In the Peace and Athabaska River valleys the precipitation was normal to twice the normal amount.

In Saskatchewan south of the main line of the C.P.R. there were excesses of twenty-five to one hundred and sixty per cent. In a fairly wide region from Medicine Hat and Swift Current to Saskatoon there were excesses of five to seventy-five per cent. Elsewhere there was a deficiency ranging from twenty to fifty-five per cent. for the most part.

Almost the whole of the agricultural region of Manitoba experienced heavy rainfall. There was an excess of seventy-five per cent. in the Dauphin district while over most of the Assiniboine and Souris basins the rainfall was twice or thrice the normal amount. In the Red River valley rainfall varied from a deficiency of ten per cent. to an excess of ninety per cent.

In the Lake Manitoba region there was a small excess while north of Riding Mountain to Le Pas there was a deficiency of fifteen to forty per cent.

Around the Lake of the Woods the rainfall varied from small excess to small deficiency but generally north and west of Lake Superior there were excesses of ten to one hundred and fifty per cent. In the eastern portion of Algoma, the northern portion of Temiskaming, most of Sudbury, on Manitoulin Island, and in the counties bordering on the Georgian Bay, Lakes Huron, St. Clair and Erie, there were deficiencies. In the regions named and lying north of the Georgian Bay the deficiency was about fifteen per cent. while in the Lower Lake region it was about thirty-five per cent.

Along Lake Ontario and the upper St. Lawrence the total precipitation was very variable, ranging from sixty per cent. below normal to two hundred per cent. above normal.

In the southwestern corner of Quebec there were deficiencies of forty per cent. generally. Along the upper and middle St. Lawrence River there were excesses of seventy to one hundred and fifty per cent. Along the Ottawa, the Gatineau, and St. Maurice Rivers and the Lake St. John region there were excesses of ten to ninety per cent. with local deficiencies along the Height of Land.

Precipitation for the most part was below the average in all Atlantic Provinces. There were deficiencies of five to seventy per cent. in New Brunswick while in Prince Edward Island and Nova Scotia the deficiencies ranged from ten to fifty per cent. In scattered districts of central and northern New Brunswick there were local excesses, while in the vicinity of Minas Basin and the southern shore of the Bay of Fundy there were excesses of ten to twenty-five per cent.

The rainfall in the western and central part of Newfoundland was above normal while the eastern coast reported deficiencies of twenty to fifty per cent.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Tm is the mean temperature of the current month.
